

Problems with spare parts? It doesn't have to be the way.

Repair isn't possible any longer? Parts or components are no longer available? We have a solution for you.

Because of the rapidity of change and progress in the electronics field, components are being developed in increasingly shorter cycles. Thus, the effective time period within a component is available is becoming shorter. This has resulted in a situation where the components for newly developed appliances are no longer available after a short period of time. Frequently, announcements about discontinuation of components from the manufacturers are made late, if at all. However, the reliability of electronic components is constantly increasing, with the result that breakdowns don't occur for years.

At this point, the spare parts are often unavailable and can only be procured with difficulty.

This can have expensive consequences, even sometimes resulting in the replacement of the entire appliance or system, simply because the required original components or modules are no longer available.

At Rohde & Schwarz Service Center in Cologne, we can help you to extend the useable lifetime of your expensive capital goods and thus increase their reliability.

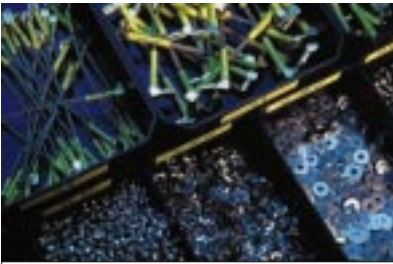

We have many years of experience in technical support and development, particularly in the fields of communications, measurement and systems technology. We have already designed cost-effective solutions for many customers who have come to us with problems in procurement of spare parts.

Even working through technical solutions for bottlenecks in spare parts procurement presents a challenge which we at the Service Center gladly accept.

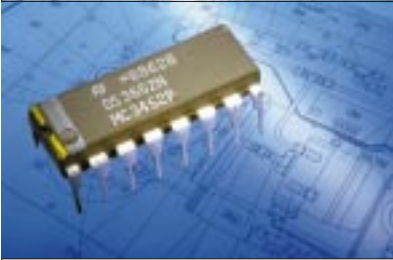

ROHDE & SCHWARZ

Contact us! We will analyze your problem and work out a specific solution for you:

- We suggest electronic spare parts to replace the spare parts you require 1:1 in the required applications profile.

- We develop integrated switches and circuits which will completely replace the required components in their functionality.

- We reproduce the complete component groups and modules 1:1,
- or we replace them in the course of redevelopment, preserving the original interfaces.

- We also assist you in the selection of complete system components, including the necessary adjustment developments, while preserving your system architecture.

Depending on the type of problem, we will create a tailor-made solution for you, combining a number of the options described above.

Your cost optimization is our aim.

We also undertake all the necessary steps for qualification and certification.

If what we've said appeals to you, and you are looking for a solution, contact us. You can count on us to help you.
